Prepress Portal System

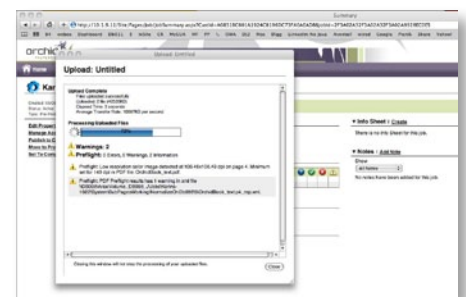

Receive customer files directly into your **Kodak Prinergy Workflow**. Provide secure Web access to customers, prepress operators, and service reps, for remote job submission, progress tracking, collaboration, remote proofing and approvals—and automate some of the most critical workflow steps, with the **Kodak InSite Prepress Portal System**.

With an **InSite Prepress Portal System**, you can provide fast, secure, easy-to-use Web access to your prepress workflow system. Your portal-based website will be custom branded with your company's identity, and any customer, service rep, or remote operator will be able to access their work anywhere, anytime. Your customers need no special hardware or software—just the user ID and password that you provide, and their preferred Web browser (**Internet Explorer**, **Safari** and **Firefox** Browser Software are supported). The system tracks all activity, including job submissions, change requests, and approvals or rejections. Pixel-streaming technology allows very large files to be accessed remotely.

The instant a job is submitted, preflight and refining can begin automatically. The system checks for problems and, if necessary, alerts customers and/or your

prepress staff, so corrected pages can be quickly uploaded. The **InSite Prepress Portal System** is a key component to a high-speed automated workflow system with fewer errors and reduced costs.

InSite PrePress Portal file upload

Remote proofing and reviewing

The **Kodak Smart Review Proofing Client** is built in. With the Smart Review Proofing Client, all stakeholders can proof files individually or in group sessions using a Web chat. Stakeholders have the assurance that they are viewing the full-resolution PDF digital master production file—they
