

Kodak Spotless printing solution

Spot color value without spot color inks

The **Kodak Spotless** printing solution produces spot color results without the application of spot color inks. Printers can run four, five, six, or seven-color presses continually, and with the same set of inks, saving on makeready, washups, and ink inventory. Jobs that require different spot colors can be run as combo jobs, while jobs with many spot colors can be run without multiple passes through the press.

With **Spotless** printing, you'll be able to meet your customers' needs more effectively, respond more quickly, and schedule jobs with greater flexibility. The net result is greater efficiency and increased profitability.

Why use **Spotless** printing technology?

- Smooth, consistent color across the press run
- Improved color on vector and raster imaging
- Faster throughput
- Batch production
- Increased market reach
- Maximum efficiency of press and pressroom resources

Kodak offers a number of tools and services that help ensure you are up and running quickly and efficiently. Get a complete **Spotless** printing solution that is specifically developed for your environment and addresses your unique business needs.

Kodak Spotless Color Toolkit software

Spotless Color Toolkit software allows analysis of color capabilities on press, storage of spot color definitions and profiles, and the creation of print condition libraries to help assure consistent color under varying conditions, including proofing.

Kodak Spotless Start-Up services

Kodak Spotless Start-Up Services are aimed at sheetfed and heatset web printers who use **Kodak Staccato** screening and plan to implement **Spotless** technology with a **Kodak Prinergy** workflow system. These services provide essential tools, as well as the product and process knowledge necessary for a successful **Spotless** software implementation.

Kodak Spotless Extended Color Management software

Spotless Extended Color Management software is an upgrade to the **Kodak Prinergy** workflow system. It expands the Prinergy system from a CMYK workflow to a six-color process workflow. It enables a composite workflow with integrated trapping and proofing that eliminates the complexity of pre-separated, six-color workflows. An open, flexible database structure automatically performs spot color replacement.

Accurate, predictable proofing

Kodak Spotless technology process color blends mean jobs can be proofed as readily as any conventional process color job. Choose from a wide range of **Kodak** proofing solutions, including the **Kodak Approval** digital color imaging system, **Kodak Veris** digital proofer, and **Kodak Matchprint** Inkjet proofing solution. All these solutions integrate N-color management, making the proofing of **Spotless** technology simple. Implementation depends on your workflow and requirements.
